# FACADE LIGHTING

An architectural facade refers to the exterior face or frontage of a building, often designed to make a visual statement or serve a functional purpose. It plays a crucial role in how a building interacts with its environment, both aesthetically and structurally. Architecture facade can be designed in many different styles, materials, and configurations depending on factors like climate, cultural context, location and the function of the building.

We understand that every building plays a role in shaping the character of a city. Our facade lighting product solutions are designed to enhance the beauty of your architecture while contributing to the overall beautification of the urban landscape. Whether you're developing a new district, refreshing a historic area, or simply improving a building's exterior, our team works with you to create lighting that complements the city's vision.

Our curated collection of architectural facade lighting is not only designed to transform individual buildings but also to elevate the entire cityscape. Whether you're illuminating a corporate headquarters, cultural landmark, or public space, our lighting solutions enhance both the beauty of your building and contribute to the overall beautification of the city. The impact of facade lighting on a building as well as its broader effect on urban spaces, creating a sense of community and citywide beautification.

The modular design allows for custom wattage, beam angles, and configurations, making it perfect for highlighting architectural details on buildings, monuments, and landmarks.

**INDIRAY SPOT FACADE LIGHT**

An LED spot facade light is a narrow-beam, high-intensity lighting fixture used to highlight architectural details of building exteriors. Unlike wall washers, which provide broad illumination, spotlights focus light on specific elements such as columns, statues, logos, or textured surfaces.
